Since 1982, Masterpiece Smiles has been committed to ensuring every smile is a masterpiece. In partnership with the TMJ and Sleep Therapy Centre of St. Louis led by Drs. Mike and Jeremy Frith, Masterpiece Smiles strives to

Mike and Jeremy Frith, Masterpiece Smiles strives to address the dental health and wellness concerns of its patients. These practices work together to create a balanced approach to dentistry by combining standard dental procedures and care with holistic therapies for dental pain management and to remediate symptoms caused by sleep disorders and jaw/joint conditions.

Dr. Mike Frith is a leader in cosmetic dentistry and utilizes pioneering dental technologies to improve every patient's smile and wellbeing. Masterpiece Smiles is renowned for its extensive comprehensive cosmetic dentistry services; the practice offers power bleaching (teeth whitening), veneers, crowns, bonding, Invisalign, and more! To create a smile that is a true work of art, Masterpiece Smiles provides advanced dental art services through laser treatment therapies for gum recontouring, boosting collagen production and alleviating pain during standard dental procedures.

Masterpiece Smiles is a local provider of neurofeedback therapies administered through IASIS Technologies. Neurofeedback uses small electrode wires to send delta wave signals that help reboot the brain. When the body is in a deep restful healing sleep, those delta wavelengths are present, and this noninvasive procedure can be used to treat symptoms related to many different medical conditions.

Cosmetic Dentistry Sculpts Portrait-Perfect Smiles

Dr. Mike Frith at Masterpiece Smiles is St. Louis' first accredited cosmetic dentist.

The practice designs smiles that are masterful works of art and offers a range of smile makeover procedures. Whether a patient simply wants a brighter smile or needs extensive restoration, Masterpiece Smiles is committed to transforming every smile into a masterpiece smile.

Through the Smile Design process, every smile is enhanced, restored and perfected to ensure it looks natural and naturally perfect. Masterpiece Smiles uses the unique facial measurements of each individual to create a smile that is ideal for their face structure. Cosmetic dental procedures

include porcelain veneers, power bleaching, tooth-colored fillings, porcelain inlays and onlays, crowns, bonding, laser gum recontouring, cosmetic dentures and bridges. A smile makeover also can include more extensive treatments like dental implants or orthodontics (like Invisalign and clear aligner expansion).

Cosmetic Dentistry Services

Looking for a Family Dentist? Masterpiece Smiles St. Louis Provides Family Dentistry Services to Brighten Everyone's Smile

Masterpiece Smiles offers dental services, care and cleaning to keep everyone's smile bright and healthy. The practice utilizes advanced dental technologies to ensure that the doctors and care team have a complete understanding of each patient's dental needs. Digital imaging and digital x-rays minimize patient exposure to radiation and capture high-definition images of the teeth and jaw. Doctors also rely on intraoral cameras to better assess dental issues that might not be visible on standard x-ray imagery.

Masterpiece Smiles offers a wide range of services, including basic care and screenings, as well as restorative procedures like tooth-colored fillings. The practice offers (and encourages) dental sealants for children to minimize the risk of decay and dental caries.

For adults, oral cancer screenings are recommended by the practice; the doctors and the care team also can help patients understand the symptoms of oral cancer and how to spot the potential warning signs.

Masterpiece Smiles elevates dental care to an art form through additional services that extend beyond basic dentistry services; the practice provides periodontal care and offers Perio Protect therapies that infuse the gum with medication to control bacterial infections that could exacerbate gum disease and lead to gingival recession. The doctors at Masterpiece Smiles can perform root canal treatments and are trained in restoring a damaged smile with bridges and dental implants.

Family dentistry procedures also focus on cosmetic treatments. For example, SmoothLase is a laser treatment that helps minimize wrinkles in the dental area, by using the laser inside the cheeks in a healing (noninvasive) mode that promotes collagen growth. PRF (Platelet Rich Fibrin) is also another treatment that helps with skin rejuvenation

that is all natural using your body's healing. In addition, prolozone injections help alleviate jaw pain.

Family Dentistry Services

Laser Treatments to Control Pain, Smooth Wrinkles, Alleviate Snoring, and Perfect the Smile

Masterpiece Smiles provides NightLase laser therapy treatments to help reduce snoring and aid in decreasing sleep apnea. This procedure is minimally invasive and can be performed in the office.*

Biostimulation laser therapies offer a soothing treatment option that can help reduce dental pain. Biostimulation enhances the body's ability to fight infections, improves circulation and can help decrease inflammation. Patients find that this treatment also is incredibly soothing and relaxing.

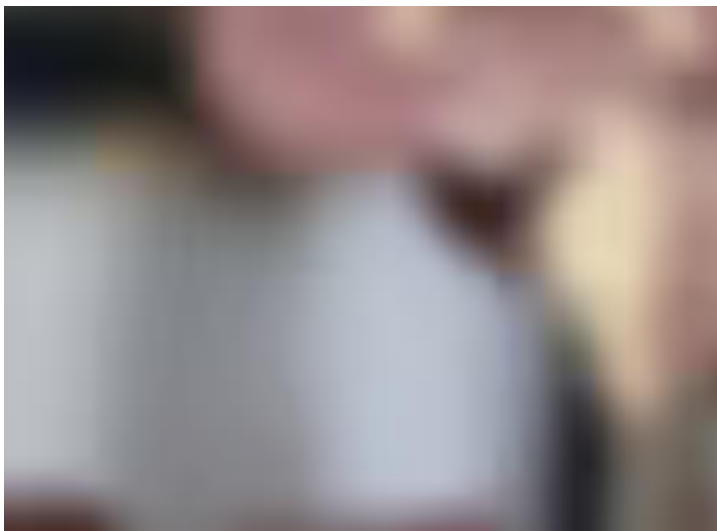

Laser-guided treatments like SmoothLase and gum contouring improve the beauty of the smile. SmoothLase minimizes wrinkles by boosting collagen and plumping up the skin. Gum contouring uses laser treatments to sculpture the gumline and perfect the smile. Some patients have uneven gums that impact the beauty of their smile; gum contouring can create a more even gum line and a more beautiful smile!

Masterpiece Smiles Offers IASIS Technologies Micro Current for Neurofeedback Therapy

IASIS refers to IASIS Technologies, a pioneer in neurofeedback therapies. This technology relies on small electro wires to transmit signals to the brain and sends delta wave signals that help reboot the brain. When the body is in deep restful sleep, those delta wavelengths are present. This therapy can be used to help certain symptoms related to many

different medical conditions. One of the benefits include aid and promoting relaxation. Improving sleep, decreasing pain and many times can help decrease anxiety. [Schedule Now](#)

Masterpiece Smiles offers brochures and videos to help patients learn more about this technology and how IASIS, a unique form of Micro Current Neurofeedback (MCN) therapies can be used to treat a variety of conditions.
